DETAILED ACTION

Note: The examiner of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Amy DeCloux, Group Art Unit 1644, Group 1640, Technology Center 1600.

Applicant's election of Group V, claims 1-4, 7-13, 39, 44 and 143-148, with traverse, in Paper No. 14, filed 1-14-02, is acknowledged. However upon consideration by the instant examiner, a species requirement is imposed.

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

A) A process for decreasing mitochondrial membrane potential comprising a **specific mammalian cell**, such as a tumor cell, as recited in claim 4,

B) A process for decreasing mitochondrial membrane potential comprising a **specific MHC Class II HLA-DR ligand**, such as CD4, as recited in claim 9 ,

C) A process for inducing the expression of immune recognition molecules on a cell surface comprising a **specific immune recognition molecule**, such as B7-1 as recited in claim 147,

Application Number 09/277,575

Art Unit 1644

D) A process for inducing the expression of immune recognition molecules on a cell surface comprising contacting a cell with a **specific metabolic inhibition agent**, such as glucose as disclosed on page 16 of the instant specification.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-4, 7-13, 39, 44 and 143-148 are generic in at least one aspect.

The species are distinct each from the other for the following reasons:

A) the recited process comprises mammalian cells which differ with respect to the structure, and biophysical and biochemical properties.

B) the recited process comprises MHC Class II HLA-DR ligands which differ with respect to the structure, and biophysical and biochemical properties.

C) the recited process comprises immune recognition molecules which differ with respect to the structure, and biophysical and biochemical properties.

D) the recited process comprises metabolic inhibition agents which differ with respect to the structure, and biophysical and biochemical properties.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

Art Unit 1644

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention. This Office action has an attached requirement for information under 37 CFR 1.105. A complete reply to this Office action must include a complete reply to the attached requirement for information. The time period for reply to the attached requirement coincides with the time period for reply to this Office action.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
